13. Implement your own ping program.

AIM: To implement our own ping program in Python that resolves a host name to its IP address and measures the response time of the host.

ping_program.py

```
import socket
import time

host = input("Enter host/IP address: ")

try:
    ip = socket.gethostbyname(host)
    print("Pinging", host, "[", ip, "]")

    for i in range(4):
        start = time.time()

        try:
            s = socket.create_connection((ip, 80), timeout=2)
            end = time.time()

            print("Reply from", ip, ": time =", round((end - start) * 1000, 2), "ms")
            s.close()

        except:
```

```
        print("Request timed out.")

    time.sleep(1)

except:
    print("Invalid host/IP address.")
```
